

## **Period 3: Lessons Learned**

### **Team 19-0076**

#### **Experience Gained**

The experience that we learned was teamwork, discovering new topics, including others, pursuing through times that were hard, and last but not least, having fun! When we had to work together, since we weren't getting along very well, we saw what we had in common and we worked together. We researched videos and looked at old designs for helping us work with our robot, program, documentation, t-shirt, etc. When we were at disagreements, we tried learning everyone's perspective, pursuing through our rough moments. Having fun was so easy with all of us after we went through problems. According to Abigaëlle Simon, she says the, "Yeah, I did have fun in this team!" Another quote from Jonathan Vu is, "I think Robotics is a very fun club, very socializing, and you can make new friends and learn new skills. Even though, our team may have many disagreements, we still have fun overall."

#### **Documentation Process**

The documentation process was pretty rough when we first started up. A lot of people in our team haven't really been in Robotics, and if they have, not Botball gogogogo

#### **Surprises**

We were not expecting for our original team group to be randomized because we had some conflicts and it was a lot of discussion and so the club decided to randomize the teams so it was more inclusive and fair.

#### **Advice for Future Teams**

For the teams that start after us, work together and respect each other. You should also try to speak up and state your opinion on whatever discussion or conflict is happening.
